Hamad Medical Corporation, Doha Qatar

Welcome to Hamad Medical Corporation, the premier non-profit health care provider in Doha, Qatar. Established by Emiri decree in 1979, the Corporation manages four highly specialized hospitals: Hamad General Hospital, Rumailah Hospital, Women's Hospital, Psychiatric Hospital and the Primary Health Care Centers.

Through the years, Hamad Medical Corporation has fulfilled its mandate of providing the best quality care for all patients irrespective of nationality, and played its role in providing "Health For All" as pledged by the State of Qatar.

Major achievements of the HMC Gastroenterology department include the introduction of Endoscopic Ultrasound and Argon Plasma Coagulation for controlling of Gastro-Intestinal Bleeding and debulking of tumors. Esophageal Ph Metry/Motility Study have been started along with computerization of the endoscopy reports with EndoSoft which is important for archiving. Dedicated GI On-Call nurse schedule to assist the Endoscopist On-Call after hospital hours for Emergency Endoscopy has been introduced.

It is therefore that EndoSoft has pride in having Hamad Medical Corporation as it's customer.

HMC needed an high quality database management system for the Endoscopy unit. It should enable them to capture images, regardless of what brand of videoprocessors were used. The system should be flexible, and easy to use. EndoSoft provided a full system including EndoWeb, Audit Trail and HL7 interface. As well as the Endoscopy, Pulmonology and Pediatric department are using EndoSoft as their archiving system. The possible saving on transcription and film costs as well as saving on valuable time made HMC choose for EndoSoft.
