St. Mark's Hospital, Harrow, United Kingdom

St. Mark's Hospital is a national and international referral centre for intestinal and colorectal disorders.

As well as clinical services covering all aspects of colorectal disease and intestinal failure, it has many research interests and a very active program of teaching and education.

The hospital was founded in 1835 and in 1995 moved from its site in City Road, London to its current location in Harrow. St. Mark's, Northwick Park and the Central Middlesex hospitals form the [North West London Hospitals NHS Trust](#). Within the trust, St Mark's has its own [management team](#).

St. Mark's goal was to implement a unified reporting and image and database management tool for both St. Mark's Hospital and The Central Middlesex Hospital. Both hospitals wanted a quality management system that would enable them to easily schedule, process and audit patients, procedures and images. EndoSoft integrated both hospital's imaging systems, 8 rooms now work concurrently on 1 single database where all patient information from the Hospital Information System can be accessed through the HL7 interface provided by EndoSoft. The EndoWeb browser application enables all consultants to review all procedures, reports and images throughout the hospital's network.

The flexibility, and ease of use enables them to save on valuable time and transcription costs, the quality images generated with Endosoft will save them on expensive films.

At EndoSoft we are excited and pleased to work with one of the leading endoscopy centers in the world.
