3 Left Circumflex Artery

4 Right Coronary Artery

**INDICATIONS FOR EXAM:** Angina Pectoris, Coronary Atherosclerosis

**PROCEDURE PERFORMED:** Percutaneous Transluminal Coronary Angioplasty

**PROCEDURE TECHNIQUE:** Under local anesthesia a 6F introducer was placed into the right femoral artery. Following placement of the arterial sheath, 10000 units of Heparin was administered as a bolus followed by a continuous infusion at the rate of 2000 units per hour. Left heart cath was performed. Coronary arteriography and left ventriculography were then performed. Following the procedure, the sheath was left in place. The patient tolerated the procedure well. Angioplasty and stenting was performed on the LAD and Left Circumflex lesions that were found.
